Today’s Student Experience in K-12 Math Classrooms

Monday February 17
Talk at 4:00 in Herman Brown 227
Tea and cookies at 3:30 in Herman Brown 438

ABSTRACT: I will discuss the challenges and opportunities faced by K-12 math educators in 2020. There are many strategies, protocols, and products that are divined on paper as ideal pedagogical solutions, but then must come alive in a messy reality. Find out about the key components that make for great math teaching & learning, and discover and experience how practitioners - both individual teachers & at those at various levels of the industry - are creating today's student experience in light of (e.g.) the Common Core, the emergence of new digital tools, and the abundance of educational data.
